Plant selection and garden style are deeply influenced by where we are gardening. To successfully grow a range of beautiful ornamental plants, every gardener has to know the specifics of the region ' s climate, soil, and geography. Gardeners in the northeast are lucky—the regular summer rain, gorgeous summer blooms, and stunning fall color make it an ideal place to garden. But there are drawbacks, like hot and humid summers, bitterly cold winters, and mosquitos. TThe practical and beautiful Growing the Northeast Garden starts with a comprehensive overview of the weather and geography of the area, along with regionally specific advice on zones, microclimates, soil, pests, and maintenance. Profiles of the best trees, shrubs, perennials, annuals, and bulbs offer hundreds of plant suggestions, along with complete information on growth and care.

The bark canoes of the North American Indians, particularly those of birchbark, were among the most highly developed manually propelled primitive watercraft. They could be used to carry heavy loads in shallow streams but were light enough to be hauled long distances over land. Built with Stone Age tools from available materials, their design, size, and appearance were varied to suit the many requirements of their users. Upon arrival in North America, European settlers began using the native-made craft for traveling through the wilderness. Even today, canoes are based on these ancient designs. This fascinating guide combines historical background with instructions for constructing one. Author Edwin Tappan Adney, born in 1868, devoted his life to studying canoes and was practically the sole scholar in his field. His papers and research have been assembled by a curator at the Smithsonian Institution, and illustrated with black-and-white line drawings, diagrams, and photos. Included here are measurements, detailed drawings, construction methods, and models. The book covers canoes from Newfoundland to the Pacific Ocean, as well as umiaks and kayaks from the Arctic.
