Description: The learner will use algebraic, numerical, and graphical approaches to solve trigonometric equations, and will also use trigonometric identities to evaluate trigonometric functions and simplify trigonometric expressions.

Precalculus Chapter 5 Analytic Trigonometry Test Review ...

$\sin^2 \theta + \cos^2 \theta = 1$ $\Rightarrow \sin^2 \theta + \cos^2 \theta = 1$ Notice that we can add the two fractions on the right because they have a common denominator: $\frac{\sin^2 \theta}{\sin^2 \theta} + \frac{\cos^2 \theta}{\cos^2 \theta} = \frac{\sin^2 \theta + \cos^2 \theta}{\sin^2 \theta \cos^2 \theta}$. We recognize that $\sin^2 \theta + \cos^2 \theta$ is the sum of the squares of the two sides of our right triangle, and that it must equal h^2 by the Pythagorean theorem. $\frac{h^2}{h^2} = 1$.

$\sin(\pi/2 - u) = \cos u$. $\cos(\pi/2 - u) = \sin u$. $\tan(\pi/2 - u) = \cot u$. $\cot(\pi/2 - u) = \tan u$. $\sec(\pi/2 - u) = \csc u$. $\csc(\pi/2 - u) = \sec u$. To prove trig identities start with the more complicated side. Use the fundamental identities, factoring, and common denominators to simplify expressions. If you're stuck, it may be helpful to rewrite functions in the terms of sines and cosines.
