Bee propolis is defined as a resinous mixture that honey bees produce by combining their own saliva and beeswax with exuded substances they collect from tree buds, sap flows and other botanical sources. Propolis color can vary depending on what the bee collects from nature to create it, but usually bee propolis is a shade of dark brown.

Even though swarming is a natural occurrence, it also means the loss of half your bee population. There are ways to catch a swarm and establish a new hive, but these are best left to the pros. It is easier to prevent the swarm by compensating your bees with what they need so they decide to stay put.
