Derivative of a Function This chapter begins with the definition of the derivative. Two examples were in Chapter 1. When the distance is t^2 , the velocity is $2t$. When $f(t) = \sin t$ we found $v(t) = \cos t$. The velocity is now called the derivative of $f(t)$. As we move to a more

For a function $f : S \rightarrow \mathbb{R}$ with some interval $[a, \infty) \subset S$ we can have different types of behaviour for $f(x)$ as x becomes large: 1. We may have $\lim_{x \rightarrow \infty} f(x) = L$ (read as the limit of $f(x)$ as x tends to ∞ is L) exists, (also written $f(x) \rightarrow L$ as $x \rightarrow \infty$ and read as $f(x)$ tends to L as x tends to ∞) i.e. $f(x)$ can be guaranteed to be ...
