Linear Motion is relative, it depends on the observer's position. The difference between speed and velocity (speed + direction) influence acceleration. To represent the movements we can use graphs, equations and tables.

Instantaneous speed is the speed in a certain point at a given instant.

Chapter 2 Newton's First Law of Motion-Inertia. Static Equilibrium. 1. Little Nellie Newton wishes to be a gymnast and hangs from a variety of positions as shown.

Since she is not accelerating, the net force on her is zero. That is, $\Sigma F = 0$. This means the upward pull of the rope(s) equals the downward pull of gravity.
