ESA - What is concurrent engineering?

Concurrent engineering, also known as simultaneous engineering, is a method of designing and developing products, in which the different stages run simultaneously, rather than consecutively. It decreases product development time and also the time to market, leading to improved productivity and reduced costs.

What is Concurrent Engineering?

There still was a desire for a program that could bridge the gap between engineering design and project management. Concurrent Simultaneous Engineering Resource View (ConSERV) is a knowledge-based project and was built with the idea that there is a relationship between design and project management. ConSERV's aim is to provide a visual representation of engineering design activities being done concurrently.
