An air-cooled chiller are systems that absorb heat from the water before transferring the heat outside of the system and into the air surrounding the chiller unit.

Once the heated air is transferred outside of the unit,

Get Free Conquest Air Cooled Chillers

it will lower in temperature and turn back into a liquid, which allows for a continuous cooling cycle. If you believe that your industrial application isn't going to produce undue amounts of heat, it's possible that the air-cooled chiller would be

~~What Is An Air
Cooled Chiller &
How Does It Work?~~

The cooling medium, ambient air, does not require any connections. Nor does a chiller with an air-cooled condenser need a cooling tower.

These installations

Get Free
Conquest Air
Cooled Chillers
have lower overall
environmental
concerns
surrounding water
treatment and
removal. An air-
cooled chiller
should be the best
choice for water
conservation.

~~Water-Cooled vs.~~
~~Air-Cooled Chillers~~
Air-cooled chillers

Cooling Chillers
And Heat
Pumps Trane

are equipped with
condensers that
utilize ambient air
to reduce
refrigerant
temperatures. Fans
are used to force
the air over tubing
containing
refrigerant and
therefore eliminate
heat from it. The
cooled refrigerant
used in chillers can

Get Free
Conquest Air
Cooled Chillers
then be circulated
through the
industrial process
to achieve a cooling
effect.
