Design and manufacturing is the essential element in any product development lifecycle. Industry vendors and users have been seeking a common language to be used for the entire product development lifecycle that can describe design, manufacturing and other data pertaining to the product. Many solutions were proposed, the most successful being the Standaard for Exchange of Product model (STEP). STEP provides a mechanism that is capable of describing product data, independent from any particular system. The nature of this description makes it suitable not only for neutral file exchange, but also as a basis for implementing, sharing and archiving product databases. ISO 10303-AP203 is the first and perhaps the most successful AP developed to exchange design data between different CAD systems. Going from geometric data (as in AP203) to features (as in AP224) represents an important step towards having the right type of data in a STEP-based CAD/CAM system. Of particular significance is the publication of STEP-NC, as an extension of STEP to NC, utilising feature-based concepts for CNC machining purposes. The aim of this book is to provide a snapshot of the recent research outcomes and implementation cases in the field of design and manufacturing where STEP is used as the primary data representation protocol. The 20 chapters are contributed by authors from most of the top research teams in the world. These research teams are based in national research institutes, industries as well as universities.

The Technology Of Cad/Cam/Cim Deals With The Creation Of Information At Different Stages From Design To Marketing And Integration Of Information And Its Effective Communication Among The Various Activities Like Design, Product Data Management, Process Planning, Production Planning And Control, Manufacturing, Inspection, Materials Handling Etc., Which Are Individually Carried Out Through Computer Software. Seamless Transfer Of Information From One Application To Another Is What Is Aimed At.This Book Gives A Detailed Account Of The Various Technologies Which Form Computer Based Automation Of Manufacturing Activities. The Issues Pertaining To Geometric Model Creation, Standardisation Ofgraphics Data, Communication, Manufacturing Information Creation And Manufacturing Control Have Been Adequately Dealt With. Principles Of Concurrent Engineering Have Been Explained And Latest Software In The Various Application Areas Have Been Introduced.The Book Is Written With Two Objectives To Serve As A Textbook For Students Studying Cad/Cam/Cim And As A Reference Book For Professional Engineers.

Arduinos are mini computers on a circuit board designed primarily for controlling electronic circuits. They have analog and digital inputs and outputs that allow them to input data and turn things on and off. For some applications (like building a robot), no direct interface with humans, such as a keyboard or display screen, is necessary. For some applications, however, you will want to display information and also input commands. For example, you may be designing a sensor device to monitor sensor readings (tricorder, anyone?). In this case, you will want to have a display. You may also want to input instructions or information into the Arduino. In that case, you will need some kind of buttons, menus, or analog control devices like volume controls. You can have an LCD display to read information and some switches and knobs, but why not combine everything into one handy input/output device? Touch screens are perfect for this. They can display information as text or graphic. You can also cause them to display buttons or other graphic symbols that you can touch to make selections. One device can handle the entire human/Arduino interaction. For this book, I will be working with the Seeed (that is not a misspelling, there are three e's.) Studio 2.4" 240 x 320 pixel touch screen Version 2 (<http://www.seeedstudio.com>). This is the best documented and most consistent touch screen on the market. However, if you are familiar with other brands of touch screens, you can still apply the basic code in this book. The libraries for each brand of touch screen might use slightly different commands for such things as initializing the screen, printing text to the screen, drawing rectangles or circles on the screen, and so on. However, if you simply substitute the appropriate command used by your screen for the one used in the sketches in this book, such as myGLCD.Init(LCD) or TrnInit() for Tr TFTInit(), the basic program concepts used in this book should work. I have written the code with most of the values, such as screen size, defined at the beginning of the sketch to allow for easy modification, and the purposes and functioning of most lines of code are explained step by step so you can understand what everything does and how to modify it to your needs. I will start out by addressing some of the problems with connecting touch screens to Arduinos due to a bit of a design flaw in the shields. I will then go on to give sketches (Arduino talk for software programs, commonly referred to as apps these days) for creating text menus, buttons, sliders, and other controls that you are probably familiar with in normal windows programs. I will also discuss outputs like text (both static and scrolling), graphs and histograms for output. There is also a chapter on creating a system for swapping screens, so you can have more than one screen of controls or information within a sketch. Finally, I will show how to use the SD (or microSD) card that some touch screens have built in. The techniques used in that chapter should work on SD card readers that come separate from touch screens too. In the Appendix, I will provide information on how to download the sketches in this book to save you typing and how to contact me for questions

Design Principles of Metal-Cutting Machine Tools discusses the fundamentals aspects of machine tool design. The book covers the design consideration of metal-cutting machine, such as static and dynamic stiffness, operational speeds, gearboxes, manual, and automatic control. The text first details the data calculation and the general requirements of the machine tool. Next, the book discusses the design principles, which include stiffness and rigidity of the separate constructional elements and their combined behavior under load, as well as electrical, mechanical, and hydraulic drives for the operational movements. The next section deals with automatic control, including its principles, constructional elements, and applications. The last section tackles the design of constructional elements, such as machine tool structures, spindles and spindle bearings, and control and operating devices. The book will be of great use to mechanical and manufacturing engineers. Individuals involved in materials manufacturing industry will also benefit from the book.

The Rough Guide Snapshot to Hamburg and Schleswig-Holstein is the ultimate travel guide to this stylish and vibrant city and the surrounding area. It guides you through the region with reliable information and comprehensive coverage of all the sights and attractions, from Hamburg's superb restaurants and nightlife to beach holidays on the North Frisian islands. Detailed maps and up-to-date listings pinpoint the best cafés, restaurants, hotels, shops, bars and nightlife, ensuring you have the best trip possible, whether passing through, staying for the weekend or longer. Also included is the Basics section from the Rough Guide to Germany, with all the practical information you need for travelling in and around Germany, including transport, food, drink, costs, festivals and outdoor activities. Also published as part of the Rough Guide to Germany. Full coverage: Hamburg, Lübeck, Ratzeburg, Eutin, Kiel, Schleswig, Flensburg, Husum, North Frisian islands, Sylt (Equivalent to 96 printed pages.)

Credit Analysis and Lending Management is a new Australasian text that focuses on the core lending functions of financial institutions, covering asset management, credit risk assessment and analysis, lending policy formulation and management, and the rise of new product development and marketing in the financial services sector. The value of any financial institution is measured by its ability to effectively manage and reduce its credit risk. This text details the structure of the credit organisation, including loan markets. Relevant financial statements are presented to develop students' interpretative and analytical understanding of financial statements. Features: * Developments in loan marketing and new loan products are profiled and assessed (see chapter 17.) * Problem loan management is discussed as a growing professional issue (see chapter 16). * Detailed case studies at the end of the text present a diverse set of professional scenarios that can be used for assignment, assessment and group work activities. * 'Industry insight' boxes profile current professional issues and identify industry developments. * 'A day in the life of...'boxes highlight the diversity of professional roles in the banking industry.
