This workbook is designed to teach the major fundamental concepts in Epidemiology, Biostatistics, and clinical research design alongside the textbook "Epidemiology and Biostatistics, 2nd Edition". It is written in concise and organized fashion with many examples to illustrate the concepts deriving from a collection of written materials created to teach Epidemiology and Biostatistics to medical students. The major differences from related titles include a " story " based approach toward teaching the material, relative brevity while maintaining focus on key concepts, and taking the perspective of first-time learners (avoiding and/or clearly defining jargon, using clear common-sense language). It features a variety of questions: long, short, and multiple choice questions. The workbook is made to provide students with the tools necessary to form their own informed conclusions from the clinical research literature.

This series extracts the most important information on each topic and presents it in a concise, uncluttered fashion to prepare students for the USMLE. High-Yield™ means exactly that!

This text focuses on the specific knowledge in this field needed by medical students for their course work and for the USMLE Step I exam. It includes 10-12 questions in each chapter using the same format as the USMLE Step I exam, followed by explanations of the answers. With a clinical focus and real-life medical examples, this exam guide includes chapters on: the US public health system, health promotion and disease prevention goals for the year 2000, and the strengths and weaknesses of the US medical care system.
