This book explores the ways in which the adoption of new paradigms, processes, and technologies can lead to greater revenue, cost efficiency and control, as well as improved business agility in the insurance industry.

Written by leading academics, researchers and insurance industry experts, this book offers a diversified perspective on how the regulatory and supervisory framework for the insurance sector will develop over the coming years. It is supported by The Geneva Association , the world-leading insurance think-tank of the private industry.

In January 1976, Raymond Barre, the first President of The Geneva Association, and Orio Giarini, its first Secretary General, founded The Geneva Papers on Risk and Insurance with the main goal of supporting and encouraging research in the economics of risk and insurance. At that time, research in the field of insurance was still embryonic and insurance was regarded as peripheral social activity. When sustained economic growth gained traction, the function of insurance gradually emerged as a key contributor to economic development. By integrating uncertainty into economic theory and benefiting from the progress of both financial economics and decision theory, research developed further in the field of insurance economics and risk management, and is now prolific. The Geneva Papers on Risk and Insurance undeniably contributed to this evolution and its impact on research in insurance has largely exceeded what its two founding members could have expected. This volume is a special collection of papers celebrating 40 Years of The Geneva Papers on Risk and Insurance. The collection looks back at the storied history of The Geneva Papers on Risk and Insurance and features papers from some of the esteemed authors who have contributed to the journal in its lifetime. This collection of papers highlights just a few of the many themes addressed in the papers published by the journal since it was created. Nevertheless, the selection exemplifies the richness and variety of topics the field of insurance covers.

Operational risk is the risk of loss from inadequate or failed internal processes, people, and systems or from external events. This book explores the different types of operational risk that threaten financial institutions, and focuses on practical due-diligence methodologies that can be used to identify these risks before it is too late.

Doctoral Thesis / Dissertation from the year 2014 in the subject Business economics - Banking, Stock Exchanges, Insurance, Accounting, grade: 1,3, University of Cologne (Seminar für Allg. BWL, Risikomanagement und Versicherungslehre), language: English, abstract: Since the 20th century, the insurance industry has experienced an unprecedented wave of M&A. However, in spite of the drastic increase in insurance M&A activity, there has been little consistent empirical evidence on the value enhancement of these deals. Hence, many open questions still exist in this research area. The most fundamental questions are whether insurance M&A actually create value and what determinants influence the success of these undertakings. This thesis attempts to find answers to these questions by first examining the status quo of academic literature published in this field of research and bringing together the empirical findings on the success of insurance M&A and its influencing factors. Overall, the literature review outlines that insurance M&A on average tend to create value for shareholders of the target firms as well as for the combined entity of acquirer and target. Moreover, shareholders of acquiring US insurance firms, on average, also benefit from these corporate undertakings. However, negative short-term as well as long-term wealth effects for acquiring insurers' shareholders are the common finding in capital market studies analyzing the effects of M&A transactions in the European insurance industry. Secondly, the reliability and validity of the findings of previous research are tested in an own empirical analysis which uses a fairly new approach to evaluating the success of M&A by using the idea of stochastic dominance (SD). More precisely, using a sample of 102 transactions conducted by publicly traded Western European insurance firms between the years 1993 and 2009, this work analyzes whether investors in acquiring insurance firms benefit from M&A by comparing return distributions of acquiring firm portfolios with benchmark portfolios using the first two orders of SD. The results show that insurance M&A trigger a negative short-term capital market reaction for acquiring European insurance firms. However, this short-term underperformance diminishes over time, and over a longer period of time of up to three years after M&A announcement, there is no underperformance of acquiring European insurers. In conclusion, based on the accumulated evidence from past empirical studies as well as the empirical investigation of this thesis, it can be concluded that M&A, not only in the US insurance market but also in the European insurance market, seem to be a viable model and are likely to lead to success for all parties involved.

Examines a new form of power in contemporary global political economy, focusing on the hybrid authority of standards in the globalisation of services. This book is also available as Open Access.

Many risks face the global insurance industry today, including the aging populations of developed countries, competition from other financial institutions, and both disparate and quickly changing regulatory demands, to name a few. The book's contributors offer their unique perspectives on challenges confronting the insurance industry and how attendant risks can be most effectively managed.
