The fact that London was not burnt to the ground in the Second World War is a direct tribute to the Fire Service of the time. In 1940, incendiaries and highly explosive bombs rained down on London for 57 consecutive nights. This is the story of that time and of the men and

women who worked through  
some of the fieriest and  
most dramatic nights of  
Britain's history.

Sometimes you know things  
you're not supposed to know.  
Things that you can never un-  
know. Things that will  
change the course of your  
life...and the fate of the  
ones you love. I found her

and close to death, but

sister, and an investigation that led to my own resurrection from the dead. Twenty-two years ago, on a cold February night, Landon Worthington lost his father for the last time. After an armed robbery gone wrong, evidence and witness testimony pointed a shaky finger at Dan Worthington—deadbeat dad and alcoholic husband. But before the dust could settle over the conviction, Landon's preteen sister, Alexis, is murdered in their home, plunging Landon's life into further despair. Two decades and a cold case later, Landon is dogged by guilt over their estranged

relationship and decides to confront his incarcerated father-of-the-year about what really happened the night of the robbery. But the years of lies are hard to unravel. And the biggest question of all haunts him: How does everything tie into his sister's murder? And so begins Landon's journey to piece together the puzzle of secrets, lies, and truths that can free his father, avenge his sister, and perhaps save himself. A companion short story to *A Secondhand Life*, the perfect mystery for fans of Robert Dugoni's *Third Watch* and Dean Koontz's *The Neighbor*.

In the pages of this text readers will find nothing less than a unified treatment of linear programming. Without sacrificing mathematical rigor, the main emphasis of the book is on models and applications. The most important classes of problems are surveyed and presented by means of mathematical formulations, followed by solution methods and a discussion of a variety of "what-if" scenarios. Non-simplex based solution methods and newer developments such as interior point methods are
