neuropsychology practice. While the new edition is updated to include new features and topics, it remains true to the highly-regarded previous editions. Methods for obtaining optimum data are given in the form of hypothesis-testing techniques, clinical tips, and clinical examples. In the seven years since the previous edition, many advancements have been made in techniques for examining brain function and in our knowledge about brain-behavior relationships. For example, a surge of functional imaging data has emerged and new structural imaging techniques have provided exquisite detail

about brain structure. For the first time, this edition includes examples of these advancements, many in stunning color. This edition also includes new tools for clinicians such as a neuroimaging primer and a comparison table of the neuropsychological features of progressive dementias. The chapters on assessment procedures include discussion of issues related to test selection and reviews of recently published as well as older test batteries used in general neuropsychological assessment, plus newly developed batteries for specific issues.

From translating the patient's medical records and test results to providing recommendations, the neuropsychological evaluation incorporates the science and practice of neuropsychology, neurology, and psychological sciences. The Little Black Book of Neuropsychology brings the practice and study of neuropsychology into concise step-by-step focus—without skimping on scientific quality. This one-of-a-kind assessment reference complements standard textbooks by outlining signs, symptoms, and complaints according to neuropsychological domain (such

While the authors have retained the same general structure--with the addition of a set of three chapters on psychosocial outcomes--virtually the entire book has been rewritten and thoroughly updated to reflect recent developments in this area of knowledge. Part I features new chapters on the Iowa-Benton approach, on cognitive screening methods, and on computers and memory. Part II has been expanded with new chapters on Tourette's syndrome, acute and chronic hypoxemia, HIV infection,

formal test data on the surface appear unambiguous and objective, they may fall into the habit of overemphasizing tests and their scores and underemphasizing all the factors that affect the validity, reliability, and interpretability of test data. But interpretation is far from straightforward, and a pragmatic application of assessment results requires attention to a multitude of issues. This long-awaited, updated, and greatly expanded second edition of the Clinician's Guide to Neuropsychological Assessment, like the first, focuses on the clinical practice of neuropsychology.

Orienting readers to the entire multitude of issues, it guides them step by step through evaluation and helps them avoid common misconceptions, mistakes, and methodological pitfalls. It is divided into three sections: fundamental elements of the assessment process; special issues, settings, and populations; and new approaches and methodologies. The authors, all of whom are actively engaged in the clinical practice of neuropsychological assessment, as well as in teaching and research, do an outstanding job of integrating the academic and the practical. In a reorganization designed to meet current thinking and assessment procedures, tests originally offered in prepackaged batteries are now presented within their appropriate functional domains. For example, individual memory tests -- whether developed singly or for use in a commercial battery -- are discussed in the chapter on memory tests, while a new chapter deals with memory batteries, questionnaires, and inventories. A separate chapter reviews prepackaged and commercial test batteries used for general-purpose neuropsychological assessment, but

Following chapters on observational measurement techniques and on measures of personality and emotional status, the concluding chapter presents an array of techniques that have been used to identify motivational problems and malingering.
