Presenting the component activities of EIA within a coherent methodological framework, *Environmental Impact Assessment: A Methodological Approach* provides students and practitioners alike with a rigorous grounding in EIA theory, including biophysical, social, strategic and cumulative assessment activities, and examines the crucial role, and limitations, of the science of EIA. Deliberately designed to be relevant world-wide, the author focuses on the common skills and generic aspects of EIA that underpin all impact assessment work, independent of country or jurisdiction, such as screening and scoping, impact identification, public involvement, prediction and monitoring,

The variety of approaches are identified along with their associated strengths and weaknesses, enabling potential, new and experienced practitioners to make informed choices and to improve their working practices through a better understanding of EIA activity. The ultimate aim of this book is to move from the notion of EIA as a technical procedure towards a concept of EIA as a particular form of problem-solving with varied methodological requirements.

assessment (EIA) provides an authoritative contemporary review of theory and practice over the past ten years. EIA is viewed as both science and art, reflecting the concern both with technical aspects of appraisal and the effects of EIA on the decision-making process. Adopted in many countries, with different degrees of enthusiasm, since its inception in the early 1970's, EIA is established as a major procedure for assessing the environmental implications of legislation, the implementation of policy and plans and the initiation of development projects. EIA is increasingly an essential part of environmental management

Edited by Joe Weston, the book draws on contributions from a number of practising experts in the field and covers topics such as: assessing the need for EIAs; the environmental team; scoping and public participation; internal and external consultation; local lobbying; local authority review and decision-making; public enquiries; monitoring the impacts; pollution control; and the lessons to be learned. *Planning and Environmental Impact*
