Dissecting Owl Pellets | Scholastic

The owl pellets that you will be examining in this lab have been collected and fumigated from common barn owls. Owl pellets themselves are ecosystems, providing food and shelter for communities which may include clothes moths, carpet beetles and fungi. Clothes moth larvae are frequently abundant in pellets, feeding on fur and feathers.

Owl Pellets Investigation - The Biology Corner

The indigestible parts of the prey (fur, bones, feathers, claws, teeth) form a pellet in the owl's gizzard. The pellet is then regurgitated, containing the remains of what was eaten. In this virtual investigation you will dissect barn owl pellets. You will sort the bones found in the pellets and identify which type of prey the owl has eaten.

Owl Pellet Dissection Virtual Lab

Step #1 – Open the owl pellet up and examine the outside. Look for fur, feathers, and other identifiable material. Before you begin, lay out the newspaper or paper towels on your work surface and put on the gloves. Most pellets are sterilized, but you should still use these precautions anyways.

How to do your own Owl Pellet Dissection (Printable ...

What are owl pellets? They are the regurgitated remains of an owl ' s meal, including all the bones of the animals it ate (usually small rodents). Owls usually swallow their food whole, digest the edible parts, and then expel the indigestible parts through their mouth as a pellet. It might sound gross, but dissecting these is a project most kids love!
