The year's program consists of 25 weekly perceptual-motor lessons designed for students in preschool, kindergarten, first to third grade and special education classes.

Perceptual-Motor Activities for Children: An Evidence-Based Guide to Building Physical and Cognitive Skills contains 200 station activities that you can use to develop perceptual-motor skills in kids from preschool through elementary grades. The activities can be used in a 32-week sequential program or individually. You also receive a web resource that offers activity cards, bonus activities, active learning cards, audio tracks, a record sheet, and other tools.

Motor skills are a vital part of healthy development and are featured prominently both in physical examinations and in parents ' baby diaries. It has been known for a long time that motor development is critical for children ' s understanding of the physical and social world. Learning occurs through dynamic interactions and exchanges with the physical and the social world, and consequently movements of eyes and head, arms and legs, and the entire body are a critical during learning. At birth, we start with relatively poorly developed motor skills but soon gain eye and head control, learn to reach, grasp, sit, and eventually to crawl and walk on our own. The opportunities arising from each of these motor milestones are profound and open new and exciting possibilities for exploration and interactions, and learning. Consequently, several theoretical accounts of child development suggest that growth in cognitive, social, and perceptual domains are influenced by infants ' own motor experiences. Recently, empirical studies have started to unravel the direct impact that motor skills may have other domains of development. This volume is part of this renewed interest and includes reviews of previous findings and recent empirical evidence for associations between the motor domain and other domains from leading researchers in the field of child development. We hope that these articles will stimulate further research on this interesting question.

Version:1.0 StartHTML:0000000226 EndHTML:0000006491 StartFragment:0000003066 EndFragment:0000006455 SourceURL:file:///localhost/Users/rhodaperhardt/Documents/Business%20docs/Publications/VPM%20book/VPBookDescription.doc This 2012 spiral-bound book is specifically designed for children with learning disorders, 4 to 14 years old, featuring more than 800 activities and 187 illustrations on 160 pages of tasks and games that are developmentally-sequenced to promote learning and insure success. It includes: • Reproducible gross motor, fine motor, and oculomotor activity charts • Illustrated directions to construct low-cost materials and equipment • References • CD-Rom to Print-Your-Own The charts help therapists, teachers, and parents by • Incorporating step-by-step progressions • Describing methods and teaching techniques • Offering suggestions for verbal and manual instructions • Guiding and modifying treatment planning • Documenting the child's daily progress

A guide that outlines a 32-week programme of sequential station activities that will help pre-school and young school aged children in various stages of development, particularly those who are lagging behind in their perceptual-motor skills. It provides what you need to create a perceptual-motor learning laboratory for your students.

More than any other textbook on the market, Play and Child Development, Fourth Edition, ties play directly to child development. The authors address the full spectrum of play-related topics and seamlessly blend research, theory, and practical applications throughout this developmentally-based resource. Readers will learn about historical, theoretical, and practical approaches to promoting development through integrated play and learning approaches across various age or developmental levels. The book analyzes play theories and play therapy; presents a history of play; and discusses current play trends. It explores ways to create safe play environments for all children, and how to weave play into school curricula. Finally, the authors examine the role of adults in leading and encouraging children's natural tendencies toward learning by playing. Special coverage includes a full chapter on play and children with disabilities, and the value of field trips in supporting learning. This edition offers expanded and/or updated coverage on evidence based play theory, child development, play environments, and early play-based curricula for children of all abilities in various learning contexts. All content in the text is purposefully arranged to guide its readers through key and core topics leading to a comprehensive understanding of play intended to help prepare pre-service teachers to lead and support children's play in a number of contexts: preschools, elementary schools, park systems, and research programs.

\*Developing Ocular Motor and Visual Perceptual Skills contains daily lesson plans and practical tips on how to successfully start an activities program. Other helpful features include a glossary of terms and a reference list of individuals and organizations that work with learning disabled children to develop these skills. The first of its kind, Developing Ocular Motor and Visual Perceptual Skills utilizes a learning approach by linking the theories with the remediation activities to help learning disabled children improve their perceptual and fine motor skills. All professionals looking to assess and enhance a variety of fine motor and visual perception deficiencies will welcome this workbook into their practices" -- Publisher description.
