Should a therapist disclose personal information to a client, accept a client's gift, or provide a former client with a job? Is it appropriate to exchange email or text messages with clients or correspond with them on social networking websites? Some acts, such as initiating a sexual relationship with a client, are clearly prohibited, yet what about more subtle interactions, such as hugging or accepting invitations to a social event? Is maintaining a friendship with a former client or client's relative a conflict of interest that ultimately subverts the client-practitioner relationship? Frederic G. Reamer, a certified authority on professional ethics, offers a frank analysis of a range of boundary issues and their complex formulations. He confronts the ethics of intimate and sexual relationships with clients and former clients, the healthy parameters of practitioners' self-disclosure, electronic relationships with clients, the giving and receiving of gifts and favors, the bartering of services, and the unavoidable and unanticipated circumstances of social encounters and geographical proximity. With case studies addressing challenges in the mental health field, school contexts, child welfare, addiction programs, home-healthcare, elder services, and prison, rural, and military settings, Reamer offers effective, practical risk-management models that prevent problems and help balance dual relationships.

Global social work: crossing borders, blurring boundaries is a collection of ideas, debates and reflections on key issues concerning social work as a global profession, such as its theory, its curricula, its practice, its professional identity; its concern with human rights and social activism, and its future directions. Apart from emphasising the complexities of working and talking about social work across borders and cultures, the volume focuses on the curricula of social work programs from as many regions as possible to showcase what is being taught in various cultural, sociopolitical and regional contexts. Exploring the similarities and differences in social work education across many countries of the Americas, Asia, Europe and the Pacific, the book provides a reference point for moving the current social work discourse towards understanding the local and global context in its broader significance.

Though there are still just twenty-four hours in a day, society's idea of who should be doing what and when has shifted. Time, the ultimate scarce resource, has become an increasingly contested battle zone in American life, with work, family, and personal obligations pulling individuals in conflicting directions. In *Fighting for Time*, editors Cynthia Fuchs Epstein and Arne Kalleberg bring together a team of distinguished sociologists and management analysts to examine the social construction of time and its importance in American culture. *Fighting for Time* opens with an exploration of changes in time spent at work—both when people are on the job and the number of hours they spend there—and the consequences of those changes for individuals and families. Contributors Jerry Jacobs and Kathleen Gerson find that the relative constancy of the average workweek in America over the last thirty years hides the fact that blue-collar workers are putting in fewer hours while more educated white-collar workers are putting in more. Rudy Fenwick and Mark Tausig look at the effect of nonstandard schedules on workers' health and family life. They find that working unconventional hours can increase family stress, but that control over one's work schedule improves family, social, and health outcomes for workers. The book then turns to an examination of how time influences the organization and control of work. The British insurance company studied by David Collinson and Margaret Collinson is an example of a culture where employees are judged on the number of hours they work rather than on their productivity. There, managers are under intense pressure not to take legally guaranteed parental leave, and clocks are banned from the office walls so that employees will work without regard to the time. In the book's final section, the contributors examine how time can have different meanings for men and women. Cynthia Fuchs Epstein points out that professional women and stay-at-home fathers face social disapproval for spending too much time on activities that do not conform to socially prescribed gender roles—men are mocked by

coworkers for taking paternity leave, while working mothers are chastised for leaving their children to the care of others. Fighting for Time challenges assumptions about the relationship between time and work, revealing that time is a fluid concept that derives its importance from cultural attitudes, social psychological processes, and the exercise of power. Its insight will be of interest to sociologists, economists, social psychologists, business leaders, and anyone interested in the work-life balance.

Over the past decade, 24/7 connectivity has given us not only convenience and fun but worries about privacy, interruptions while working or trying to enjoy family or other downtime, and new compulsions — from shopping to tweeting and cute-cat watching. Anne Katherine, one of the authors who brought boundary setting to a mass audience, has now written a book on how to set healthy boundaries with technology. The first of its kind, this resource doesn't suggest anyone go "cold turkey." Instead, it helps people make social media, smart phones, and other innovations work for, rather than against, them. Readers learn to protect themselves online in every way — from predators and data mining as well as time-devouring friends and acquaintances — with an emphasis on preserving and optimizing meaningful personal connections. Anyone who has ever wondered if their cute little gadget was actually an enemy invader will welcome Katherine's strategies for ensuring "that your life is truly your own."

This book is for the professional who feels unsure when entering the gray areas that inevitably arise in psychotherapy practice. The author carefully differentiates between what constitutes appropriate and helpful boundary crossing rather than inappropriate boundary violation and explores the ethical and clinical complexities involved in boundary issues such as the exchange of gifts, nonsexual touch, and more.
