The Voynich Manuscript, a mysterious tome discovered in 1912 by the English book dealer Wilfrid Michael Voynich, has puzzled scholars for a century. A small six inches by nine inches, but over two hundred pages long, with odd illustrations of plants, astrological diagrams, and naked women, it is written in so indecipherable a language and contains so complicated a code that mathematicians, book collectors, linguists, and historians alike have yet to

Along the way, they explain the many proposed solutions that scholars have put forth and the myriad attempts at labeling the manuscript's content, from Latin or Greek shorthand to Arabic numerals to ancient Ukrainian to a recipe for the elixir of life to good old-fashioned gibberish. As we journey across centuries, languages, and countries, we meet a cast of impassioned characters and case-crackers, including, of course, Bacon, whose own personal scientific contributions, Voynich author or not, were literally and figuratively astronomical. *The Friar and the Cipher* is a wonderfully entertaining and historically wide-ranging book that is one part *The Code Book*, one part *Possession*, and one part *The Da Vinci Code* and will appeal to bibliophiles and laypeople alike.

was an enciphered message. In 1912, a book dealer named Wilfrid Voynich came into possession of an illuminated cipher manuscript once belonging to Emperor Rudolf II, who was obsessed with alchemy and the occult. Wartime codebreakers tried—and failed—to unlock the book's secrets, and it remains an enigma to this day. In this lively and entertaining book, Craig Bauer examines these and other vexing ciphers yet to be cracked. Some may reveal the identity of a spy or serial killer, provide the location of buried treasure, or expose a secret society—while others may be elaborate hoaxes. *Unsolved!* begins by explaining the basics of cryptology, and then explores the history behind an array of unsolved ciphers. It looks at ancient ciphers, ciphers created by artists and composers, ciphers left by killers and victims, Cold War ciphers, and many others. Some are infamous, like the ciphers in the Zodiac letters, while others were created purely as intellectual challenges by figures such as Nobel Prize-winning physicist Richard P. Feynman. Bauer lays out the evidence surrounding each cipher, describes the efforts of geniuses and eccentrics—in some cases both—to decipher it, and invites readers to try their hand at puzzles that have stymied so many others. *Unsolved!* takes readers from the ancient world to the digital age, providing an amazing tour of many of history's greatest unsolved ciphers.

Drawing on the fields of psychology, neuroscience and anthropology, a New York Times best-selling author unlocks the secrets of mystery's allure, shedding new light on everything from the formulas of our favorite detective shows to the calculated risks of the stock market.

On March 15, 1348, Joanna I, the queen of Naples, stood trial for her life before the Pope and his court in Avignon. She was 20, and accused of murdering her cousin and husband, Hungarian prince Andrew. That she won her acquittal--arguing her own case in Latin--was remarkable in its own right; that she would go on to rule over one of Europe's most glittering courts for more than 30 years was extraordinary. For the first time, Nancy Goldstone tells the full story of one of the most courageous and accomplished women in history, who challenged the powers of her time, and whose life highlights the dynastic rivalries and alliances across Europe in the dramatic 14th century. She was the only woman in her time to rule in her own name.

Dedicated to the welfare of her subjects and realm, Joanna reduced crime, built hospitals and churches, encouraged the licensing of women physicians, and lured some of the most important writers and artists of the century to her glamorous, elegant court, which rivaled that of Elizabeth I of England in power and scope. Around her also swirled war, plague, and the intrigue and treachery that

would ultimately be her downfall. As Nancy Goldstone reveals, in Joanna's legacy are found the seeds of both the Renaissance and the Reformation. For anyone who has enjoyed the works of Alison Weir, Amanda Foreman, and Antonia Fraser, The Lady Queen will be must reading.

Cybernetic Revelation explores the dual philosophical histories of deconstruction and artificial intelligence, tracing the development of concepts like the "logos" and the notion of modeling the mind technologically from pre-history to contemporary thinkers like Slavoj Žižek, Steven Pinker, Bernard Stiegler and Daniel C. Dennett. The writing is clear and accessible throughout, yet the text probes deeply into major philosophers seen by JD Casten as "conceptual engineers." Philosophers covered include: Anaximander, Heraclitus, Parmenides, Plato, Aristotle, Philo, Augustine, Shakespeare, Descartes, Spinoza, Leibniz, Locke, Berkeley, Hume, Kant, Hegel, Nietzsche, Freud, Jung, Joyce, Dewey, Wittgenstein, Heidegger, Adorno, Benjamin, Derrida, Chomsky, Žižek, Pinker, Dennett, Hofstadter, Stiegler + more; with special chapters on: AI's history, Complexity, Deconstructing AI, Aesthetics, Consciousness + more...

textual records throughout human history, from the earliest periods of traceable communication—perhaps as early as 60,000 BCE—to the present day. At its core, it examines the material history of communication: what constitutes a text, the purposes for which it is intended, how it functions, and the social ends that it serves. This coursebook can be used to support any pedagogical or research activities in text technologies, the history of the book, the history of information, and textually based work in the digital humanities. Through careful explanations of the field, examinations of terminology and themes, and illustrated case studies of diverse texts—from the Cyrus cylinder to the Eagles' "Hotel California"—Elaine Treharne and Claude Willan offer a clear yet nuanced overview of how humans convey meaning. Text Technologies will enable students and teachers to generate multiple lines of inquiry into how communication—its production, form and materiality, and reception—is crucial to any interpretation of culture, history, and society.

When it comes to extraterrestrials, UFOs, crop circles, and ancient-astronaut literature, most intelligent readers are repulsed by New Age hype, turned off by Erik Van Daniken, flustered by blatant pseudo-science, and deeply chagrined at how even the History Channel got dragged into the tabloid

and sensational. Yet many intelligent, open-minded readers harbor secret interests: in the Great Pyramid and how it was built, in mythic tales of sky gods coming and going, from Ezekiel to the Rig-Veda. They are awed by the intricate fractals in crop circles, and they more than take notice when a NASA astronaut says he was trailed in space by UFOs. That questioning readership, however, swims in a vast sea of agnosticism—curious but not convinced. And there just aren't any books for them. None they can trust. None that reaches them. None that transcends tabloid fantasies to authentically treat issues with enough dispassion and scholarly erudition not to insult their intelligence. Here, Dr. Kroth gives the run-down on a wide range of evidence, and ponders how reliable any of it may be. Readers are left with all the elements to form their own equation.

Paul Doherty's fourteenth novel in the brilliant Hugh Corbett series. Friar Roger's Bacon's book of secrets is coveted in both France and England, but the brilliant, controversial scholar has concealed his discoveries behind a mystifying code. When Sir Hugh Corbett, spy master to King Edward I, instructs his agents to prise the book from its hiding-place in Paris, they succeed only at a violent and bloody cost. A meeting between the scholars of both countries is demanded by Philip IV of France to discuss whether the code can ever be broken, and

Edward, bound by his recent peace treaty with Philip, is forced to agree. The meeting takes place at Corfe Castle, which soon becomes a place of murder, mystery and mayhem. Young women from the castle are being slain and then two of the French scholars die in sinister circumstances. Corbett has to thread this murderous maze, whilst at the same time, trying to decipher the secrets of one of England's greatest scholars.
