Gabriel Léon M'ba [needs IPA] (9 February 1902 – 28 November 1967) was a Gabonese politician who served as both the first Prime Minister (1959–1961) and President (1961–1967) of Gabon.. A member of the Fang ethnic group, M'ba was born into a relatively privileged village family. After studying at a seminary, he held a number of small jobs before entering the colonial administration as a ...

The author of Zero explains the scientific revolution that is transforming the way we understand our world Previously the domain of philosophers and linguists, information theory has now moved beyond the province of code breakers to become the crucial science of our time. In Decoding the Universe, Charles Seife draws on his gift for making cutting-edge science accessible to explain how this new tool is deciphering everything from the purpose of our DNA to the parallel universes of our Byzantine cosmos. The result is an exhilarating adventure that deftly combines cryptology, physics, biology, and mathematics to cast light on the new understanding of the laws that govern life and the universe.

Who are the Jews? Where did they come from? What is the connection between an ancient Jewish priest in Jerusalem and today's Israeli sunbather on the beaches of Tel Aviv? These questions stand at the heart of this engaging book. Geneticist David Goldstein analyzes modern DNA studies of Jewish populations and examines the intersections of these scientific findings with the history (both biblical and modern) and oral tradition of the Jews. With a special gift for translating complex scientific concepts into language understandable to all, Goldstein delivers an accessible, personal, and fascinating book that tells the history of a group of people through the lens of genetics. In a series of detective-style stories, Goldstein explores the priestly lineage of Jewish males as manifested by Y chromosomes; the Jewish lineage claims of the Lemba, an obscure black South African tribe; the differences in maternal and paternal genetic heritage among Jewish populations; and much more. The author also grapples with the medical and ethical implications of our rapidly growing command of the human genomic landscape. The study of genetics has not only changed the study of Jewish history, Goldstein shows, it has altered notions of Jewish identity and even our understanding of what makes a people a people.

While the fate of Africa is much discussed in the West, Westerners rarely hear the voices of Africans themselves in the debate over the future of this imperiled continent. Pan-Africanism aims to unite the many different peoples of Africa and the Diaspora (in the West indies, Latin America, the U.S., and the U.K.). As a political movement, Pan-Africanism first found expression 100 years ago and has since then waxed and waned, according to wars, economic and political tides and the often fickle vicissitudes of Western influence. Bringing together over a dozen influential writers, political leaders, and activists, Pan-Africanism defines what constitutes the movement as we approach the millennium. By addressing such subjects as the role of science and technology in Africa's future and the potential for a Pan-African women's movement, the writers offer a valuable overview of the political economy of uniting across the continent and beyond, at a time when the threat of recolonization looms large.

The survival of African belief systems and social structures in contemporary African American culture

Given jurisdiction over race and national origin but not religion, federal agents have had to determine whether Jewish Americans constitute a race or national origin group. They have been unable to do so. This has led to enforcement paralysis, as well as explosive internal confrontations and recriminations within the federal government. This book examines the legal and policy issues behind the ambiguity involved with civil rights protections for Jewish students. Written by a former senior government official, this book reveals the extent of this problem and presents a workable legal solution.

In 1997, M. E. R. Mathivha, an elder of the black Jewish Lemba people of South Africa, announced to the Lemba Cultural Association that a recent DNA study substantiated their ancestral connections to Jews. Lemba people subsequently leveraged their genetic test results to seek recognition from the post-apartheid government as indigenous Africans with rights to traditional leadership and land, retheorizing genetic ancestry in the process. In Genetic Afterlives, Noah Tamarkin illustrates how Lemba people give their own meanings to the results of DNA tests and employ them to manage competing claims of Jewish ethnic and religious identity, African indigeneity, and South African citizenship. Tamarkin turns away from genetics researchers' results that defined a single story of Lemba peoples' " true " origins and toward Lemba understandings of their own genealogy as multivalent. Guided by Lemba people ' s negotiations of their belonging as diasporic Jews, South African citizens, and indigenous Africans, Tamarkin considers new ways to think about belonging that can acknowledge the importance of historical and sacred ties to land without valorizing autochthony, borders, or other technologies of exclusion.

For sceptics, angels may be no more than metaphors: poetic devices to convey, at least for those with a religious sensibility, an active divine interest in creation. But for others, angels are absolutely real creatures: manifestations of cosmic power with the capacity either to enlighten or annihilate those whose awestruck paths they cross. Valery Rees offers the first comprehensive history of these beautiful, enigmatic and sometimes dangerous beings, whose existence and actions have been charted across the eons of time and civilization.Whether exploring the fevered visions of Ezekiel and biblical cherubim; Persian genii; Arab djinn; Islamic archangels; the austere and haunting icons of Andrei Rublev; or Wim Wenders' Wings of Desire and the more benign idea of the watchful guardian angel, the author shows that the ubiquity of these celestial messengers reveals something profound, if not about God or the devil, then about ourselves: our perennial preoccupation with the transcendent.
