Linearly dependence A set of vectors is said to be linearly dependent if one of the vectors in the set can be defined as a linear combination of the others. Remark: if no vector can be written this way, then the vectors are said to be linearly independent.

The final two chapters are different, being more or less self-contained accounts of special topics that explore more advanced aspects of modern algebra: tensor fields, manifolds, and vector calculus in Chapter 4 and matrix Lie groups in Chapter 5. The reader can choose to pursue either chapter. Both deal with vast topics in contemporary

## ~~Linear Algebra II~~

Vector calculus, or vector analysis, is concerned with differentiation and integration of vector fields, primarily in 3-dimensional Euclidean space  $\mathbb{R}^3$ . The term "vector calculus" is sometimes used as a synonym for the broader subject of multivariable calculus, which includes vector calculus as well as partial differentiation and multiple integration. Vector calculus plays an important role in differential geometry and in the study of partial differential equati

First of all, as its title suggests, it goes through vector calculus and culminates in the theory of differential forms, using linear algebra as a 'convenient setting and language for multivariate calculus'. It's a unified, and very pedagogic, approach.
