In spite of VW's much publicised woes, I presumed my 1.6 TDi diesel would be one to be recalled for modification. But happily this is not the case and the Golf Mark 7 bought in March 2014 has proved to be a reliable, economic car. In many ways it is understated , almost fitting seamlessly into executive class.

Transportation, Energy Use and Environmental Impacts shows researchers, students and professionals the important connection between transportation planning, energy use and emissions. The book examines the major transportation activities, components, systems and subsystems by mode. It closely explores the resulting environmental impacts from transport planning, construction and the decommissioning of transportation systems. It discusses transportation planning procedures from an energy use standpoint, offering guidelines to make transportation more energy consumption efficient. Other sections cover propulsion and energy use systems, focusing on road transportation, railway, waterway, pipeline, air, air pollutants, greenhouse gas emissions, and more. Shows the relationship between road, rail, maritime, air and pipeline transportation activities with fuel use and pollution, greenhouse gases and waste Provides a comprehensive approach, covering transportation system planning, design and infrastructure construction Synthesizes the needed information and data, explaining how to improve transportation system performance Includes learning aids, such as cases from around the globe, a glossary, extensive bibliography, chapter objectives, summaries and exercises

This huge photo retrospective features hundreds of photographs depicting Volkswagen vehicles of every size and shape, from the very first Beetle in 1945 to the soon-to-released, all-new Microbus. Photographs culled from company archives and private collections are accompanied by detailed captions that describe the development and production of each vehicle and, in the process, comprise a comprehensive timeline detailing the evolution of Beetles, Buses, Karmann-Ghias, Rabbits, Sciroccos, Golfs, Dashers, Things, Jettas, Kubelwagens, Passats and more.

An examination of the greening of the automotive industry by the path dependence of countries and carmakers' trajectories. Three sources of path dependency can be detected: business models, consumer attitudes, and policy regulations. The automobile is changing and the race towards alternative driving systems has started!
